THE  
CHARITY HOSPITAL  
OF LOUISIANA,

WAS FOUNDED IN THE YEAR 1786

BY

*DON ANDRES ALMONASTER Y ROXAS,*

To whose generous endowment, the munificence of the

*LEGISLATURE OF THIS STATE,*

and the liberality of the State of Pennsylvania, the community is indebted  
for the means of erecting this edifice, built in the year

**1832.**

His Excellency A. B. Roman, being Governor and Ex-Officio President  
of the Institution.

*To record which and inscribe hereon the names and contributions of  
its distinguished benefactors,*

**THIS TABLET HAS BEEN ERECTED.**

ANNUAL REPORT  
OF THE  
BOARD OF ADMINISTRATORS OF THE CHARITY HOSPITAL

*For the Year Ending December 31st, 1906.*

CHARITY HOSPITAL,  
STATE OF LOUISIANA, }  
NEW ORLEANS, February 1, 1907.

To His Excellency, N. C. Blanchard, Governor of the State of Louisiana, and Ex-officio President of the Charity Hospital Board of Administrators:

*Your Excellency*—The following report of the Board of Administrators herewith submitted, furnishes a clear, though brief, statement of Hospital affairs during the past year.

For further details you are respectfully referred to the reports appended.

The funds at our disposal have been judiciously and economically employed for the best interests of this Institution.

The income for the year 1906, from all sources, amounted to \$150,819.25, being less by \$6,276.21 than that of the preceding year. This can be accounted for in the shrinkage from auctioneers' returns of \$5,514.28, from rent of batteure property \$2,228.00, and from donation and legacies \$3,230.43, making a total loss of \$10,972.71 than at the close of 1905. This was, in a measure, compensated by a gain of over \$4,000.00 from slaughterhouse fees, licenses, gate receipts, certificates, rent of property on Villere street and from deceased patients.

The disbursements amounted to \$156,507.62 and exceeded those of 1905 by \$8,558.87. This increase is largely due to the cost of repairs and general improvements, which exceeded those of 1905 by \$10,263.83, and for medical and surgical supplies, for which \$2,500.00 more were expended. To the credit of the Hospital, in the Special Fund, there was on the 31st of December, \$58,323.28, which has since been greatly increased.

During the year there were admitted 8,452, and including the 677 remaining, 9,129 received treatment. Of those who entered during the year, 5,027 were white and 3,425 colored, of both sexes, inclusive of children. In the Outdoor Clinic for Men and Boys, 10,657 were treated, and 35,269 consultations given. In the Clinic for Women and Girls, 8,902 received treatment and were given 35,647 consultations. The total number treated in the two Clinics amounted to 19,559, and of consultations 70,916. The total number of deaths were 1,295, of which 654 were white and 641 colored. The gross death rate was 14 $\frac{1}{2}$  per cent., and the net, 9 per cent., after deducting the deaths occurring within 24 or 48 hours.

The obstetrical cases numbered 295, of which 163 were white and 132 colored. There were 1,894 ambulance calls, and of accident cases 6,104. The surgical operations performed numbered 2,280, and the Registrar reports a tabulated record of 7,543 cases.

In the Pasteur Clinic 324 applied for treatment, and of that number only 210 were considered suffering from rabies infection.

The Pathological Department reports the number of examinations during the year of blood, urine, sputa and pathological specimens, which will be found embodied in the report of the House Surgeon.

The improvements during the year have consisted in the establishment of a registration bureau, in which are properly classified, tabulated and preserved the clinical records of the Hospital, which will prove of great value to this Institution and to the medical profession. As the system is quite complicated, a lady registrar from Bellevue Hospital, upon the invitation of the House Surgeon, came to New Orleans and established the bureau. It is now satisfactorily and ably conducted by Dr. Patton. The Electro-Therapeutic service has been fitted with the latest modern appliances for this line of work. All of the rear windows of the main building have been enlarged, giving

more light and ventilation in the wards. Several of the buildings have been screened, and soon this work will include the other buildings, thus rendering the use of bars unnecessary and lessening the risk of contagion and infection, especially should yellow fever appear. In addition to ordinary repairs, all of the buildings of the Hospital proper have received two coats of paint.

The growth of the Hospital, following the erection of its various annexes, has not only increased the cost of maintenance but made imperative the installation of larger boilers, as those now in use are too small, and having served for thirty years, are not only unequal to the demands upon them but will soon prove unsafe, as our engineer informs us. The limited area occupied by the engine-room will not admit of the substitution of larger boilers and a more central site will have to be selected for the power-house.

The present Laundry is now inadequate for present requirements. It should be furnished with more modern equipments to expedite the work of that department with the greatest economy of labor. The limited space it occupies opposes any further additions.

At the last session of the Legislature the Board applied for funds for the erection of an Administration Building, which would be in keeping with the Milliken and Hutchinson Memorials, plans for which had been submitted to the Board with those of the latter building. It would have contained kitchens, a modern laundry, dining and office rooms and quarters for the Sisters. The old building, forming the south wing of the Hospital and now serving these purposes, would have been converted into wards for the segregation of the colored males and to correct the unsanitary condition resulting from overcrowding. The third story would have served as a dormitory for the male employees, who, for the most part, sleep in the wards among the sick. A state of affairs not conducive to securing the best

class of helps and to be deprecated for sanitary reasons. The sum appropriated fell short of that required, and the changes needed have been deferred.

Since the appeal to the Legislature a highly esteemed and benevolent lady, Mrs. Samuel Delgado, bequeathed the sum of \$20,000.00, to which her nephew, Mr. Isaac Delgado, a prominent and worthy citizen of New Orleans, has added \$180,000.00 for the erection of a Memorial Building for the care of surgical and gynecological cases. In this great benefaction the generous donor not only fulfills the wishes of his relative, which she had hoped to see realized, but also the promptings of a kindly nature seeking to better the lot of the sick, and alleviate suffering by furnishing better accommodations and improved facilities for treatment.

The Milliken, the Hutchinson and the Delgado Memorials will prove enduring monuments to preserve in grateful memory the names of these benefactors of the afflicted poor.

The erection of the Delgado Memorial will add to the cost of maintenance, and render necessary a larger force of employees and an increase of the Resident Student and Nursing Staffs, the latter of which is far short of the number now required.

From the Training School for Nurses, 21 graduated on the 12th of December. There were on 31st of December, 59 nurses, 8 probationers, and 9 of the graduates who are making up for lost time. It is to be hoped that the corps will be materially increased during the year.

Before concluding, the thanks of the Board are extended to all the officers of this Hospital for the able and faithful discharge of their respective duties, which meets with full appreciation and commendation.

To Sister Agnes and the corps of Sisters, for their excellent management, devotion to duty and motherly care and supervision of the inmates of this Hospital.

To our attorneys, of the firm of Farrar, Jonas & Kruttschnitt, whose services in all legal matters are gratuitously and cheerfully given.

To the Visiting Surgical and Medical Staff.

To the Resident Students for their courteous and gentlemanly bearing, their zeal in the discharge of duties and their appreciation of the advantages offered in perfecting their medical education.

To the Nurses in training, for their earnest efforts to fit themselves for a noble calling; for their faithful observance of rules and regulations and for their tender care of the sick entrusted to their charge.

To the Ambulance Corps, and to all the employees of the Hospital.

In conclusion, my colleagues, I tender you my sincere thanks and grateful appreciation for your uniform courtesy and friendly regard, and to the able, efficient and zealous Chairman of the House Committee, the thanks of his associates. The burden of work devolves upon the House Committee, and whilst each one of us has labored earnestly in the interest of this great Hospital, it must be conceded that the responsibilities of the Chairman of the House Committee have been larger and the burden of work greater.

E. S. LEWIS, M. D.,

VICE-PRESIDENT C. H. BOARD.

## Annual Report of the House Committee.

CHARITY HOSPITAL,  
STATE OF LOUISIANA,  
NEW ORLEANS, February 1, 1907.

To the Vice-President and Board of Administrators, New Orleans Charity Hospital, New Orleans, Louisiana:

*Gentlemen*—Your “House Committee” respectfully report that during the past year the openings fronting court of main building were enlarged, adding to the comfort of the patients and improving the conditions as to ventilation and light.

The main building was screened with patent re-enforced metal sash bronze screens, protecting the unfortunate sick from pestiferous insects and permitting the dispensing of all mosquito bars throughout the wards.

The Clerks’ building and rooms of Assistant Surgeons and Students, the Secretary’s office and rooms of the House Surgeon, the Pathological building and second story of Ambulance building, used as dormitories for students, were likewise screened.

Porcelain lined tubs and lavatories have been increased throughout the buildings, both in white and colored wards.

A complete Therapeutic Department was arranged, fitted out with hard oil partitions, with metal and glass furnishings, and separated into four compartments and modern electrical appliances introduced.

A special room in the Obstetric Department was provided as a Confinement Ward; lavatories and electric connections arranged for illuminating purposes, materially enlarging and improving this Department.

The work of painting has been general and continuous during the past year. The exterior of many, if not all, of the

buildings had not been scraped or painted for periods of from five to ten years. Each of the following buildings were scraped and received not less than two coats of best paint procurable. The work was done under the supervision of Chief Engineer Ponder. The following is a list of buildings painted and cost thereof:

Gravier Street Addition.....	{ Labor.....	\$807 00	
	Material...	307 23	1,114 23
Main Building.....	{ Labor.....	1,071 20	
	Material...	369 70	1,440 90
Outdoor Clinics and Office Buildings.....	{ Labor.....	933 05	
	Material...	172 14	1,105 19
Sisters' Building.....	{ Labor.....	771 90	
	Material...	265 96	1,037 86
Female Building (colored).....	{ Labor.....	728 80	
	Material...	136 11	864 41
Amphitheatre.....	{ Labor.....	255 50	
	Material...	27 60	283 10
Laundry Building.....	{ Labor.....	422 50	
	Material...	133 03	555 53
Milliken Memorial.....	{ Labor.....	251 50	
	Material...	48 98	300 48
			\$6,701 70

Fire apparatus is in good condition, and regularly inspected.

The tabulated statement following shows an increase in repairs and improvements over last year of \$10,262.83, and while this is readily accounted for in the items of painting, permanent improving in the way of screening, openings in main building and addition of special departments to our charities, we draw particular attention to the fact that in the discharge of regularly employed tinnings and painters heretofore carried under the heading of "Employees," that that account is correspondingly reduced, as the salary of tinnings and cost of all material used, as well as salaries of painters, etc., were charged against the repairs and improvements.

The following recapitulation, especially arranged by our Committee, makes comparison with last year's expenses possible, and shows per capita cost of operation :

PATHOLOGICAL DEPARTMENT.

				PER CAPITA COST
Meat .....	1905 \$11,097	31	1906 \$10,746	48

The Milliken Memorial was screened during the year at a cost of approximately \$1,000.00, which expense was borne entirely by Mrs. Richard Milliken, further endearing her to the grateful children, in the exercise of whose care and attention she is so painstaking.

The unfinished matters before your Committee consist of the enlargement of the Pathological Department, plans and specifications for which are in the hands of bidders, as well as plans and specifications for the screening of all Hospital buildings.

#### AMBULANCES.

Every effort possible has been made by this Committee to better the sufficiency of this Department; and, without egotism or flattery, we point to that branch of our great charities with pride. The trunk system of telephones, recommended by us and approved of at your December meeting, will soon be installed, and providing, as it does, a direct public line for use of "Ambulance Calls," only the response to the unfortunate in emergency cases will be all the more prompt and the results all the more gratifying.

#### RECOMMENDATIONS.

We would consider our report incomplete without again recommending to you, gentlemen, the absolute necessity of a new power plant.

Our Engineer, Mr. Ponder, has forcibly brought to our attention the fact that, with the present boiler capacity, it would be impossible to take care of the additional building proposed, the Delgado Memorial.

Our machines are old and antiquated, necessitating unwarranted expense for fuel and continuous expense for repairs, and in providing for the removal of this Department, we can plainly see a possibility for the establishment of "Isolation Wards" upon the premises now occupied by the Engineering Department, without which our Hospital is incomplete.

We cannot too strongly recommend the able services of Chief Engineer Ponder, whose duties are constant and well performed.

We are obligated to Dr. Vincent Ranna, Veterinarian, who has taken care of our horses when sick without charge to the Institution.

Respectfully submitted,

LOUIS ED. VALLOFT, *Chairman.*

JOHN T. GIBBONS,

WM. G. VINCENT.

## Annual Report of the Finance Committee.

CHARITY HOSPITAL,  
STATE OF LOUISIANA,  
NEW ORLEANS, February 1, 1907.

To the Vice President and Board of Administrators:

*Gentlemen*—Your Finance Committee respectfully report that the accompanying statement, prepared by the Treasurer, has been duly examined by the special Committee appointed for that purpose, and found to be correct. This statement gives a history in detail of all the receipts and disbursements during the year 1906. It shows the total receipts of \$150,819.25 for 1906, as against \$157,095.46 for 1905, or a decrease of \$6,276.21. It also shows the total disbursements for 1906 to be \$156,507.62, as against \$146,948.75 for 1905, or an increase of \$9,558.77. At the close of the year there was a balance in the General Fund of \$3,436.81, as against a balance of \$9,266.19 at a corresponding period in 1905.

The items of disbursements show no marked increases over similar items in 1905, except Repairs and Improvements, aggregating \$10,262.83, and medical and surgical supplies, \$2,517.10. This increase is offset by the following decreases:

Meat.....	\$750.00
Bread.....	239.49
Milk.....	251.30
Groceries.....	562.86
Insurance.....	3,630.61

and there was a decrease in the amount paid employees of \$519.10.

The following items of cash receipts show increases during the past year:

---

Slaughter House Fees, Act 87, 1888.....	\$ 385 61
Licenses.....	2,193 40
Gate Fees.....	1,198 10

There was a decrease in rent of batture property amounting to \$1,428.50, and a decrease in "Auctioners' Returns" amounting to \$5,514.28.

The Special Fund is deposited in various banks, now bearing a uniform rate of 3½ per cent. per annum interest. The total amount to the credit of this Fund, including interest, on December 31, 1906, was \$58,323.28.

As mentioned in previous reports, this Fund is created and maintained by donations and legacies, and is used for the purpose of erecting new buildings and making permanent improvements. It is, from time to time, added to by benevolent friends of the Institution. A list of the contributors to the Special Fund forms a part of the Treasurer's Report. A striking contribution to this fund, made since the close of the year, was the payment on January 14, 1907, of \$20,000.00 by the estate of the late Mrs. Samuel Delgado.

An unknown donor has also contributed the sum of \$25,000.00 in bonds of the State of Louisiana, known as "Baby Bonds." Your Committee is unable at this time to give the value of these bonds, but hope that at some future time some substantial amount may be derived from their sale or redemption by the State.

Respectfully submitted

HUNTER C. LEAKE,

R. E. CRAIG,

G. A. WIEGAND,

*Finance Committee.*

## Annual Report of the House Surgeon.

CHARITY HOSPITAL,  
STATE OF LOUISIANA,  
NEW ORLEANS, February 4, 1907.

To the Board of Administrators of the Charity Hospital:

Gentlemen—As Executive Officer of this Institution, it becomes my duty to submit a detailed account of the management of its medical affairs and to transmit for your scrutiny the official records for 1906.

In analyzing the various chapters that compose the record of this year's work, we are afforded no opportunity to chronicle any vast improvements; no additional buildings have been reared, no special provision has been made whereby contagious and infectious diseases may be properly segregated; and no increase in ward-room for the relief of overcrowded wards has been brought about. Yet such has been the desire of both your Honorable Board and the Executive Officer of this Hospital. That such material improvements have not been realized has been due to no indifference on the part of your Honorable Body, nor to failure on the part of the House Surgeon to recognize the importance and urgent necessity for the same. While we are constrained thus to frankly confess to necessitous improvements that have not been made, we may claim to have used those facilities which we have had to the best advantage. In the past year nothing untoward has occurred to disturb the routine medical service of the Institution. There has been no outbreak of infectious disease and no interruption from any cause to the normal services of the Medical and Nursing Corps.

The concreted statistics of the Hospital for the year show there were 8,452 patients admitted: White, 5,027; colored,

3,425. White male adults, 3,179; white female adults, 1,353; colored male adults, 2,229; colored female adults, 1,043; children, 648; white, male, 301; white, female, 194; colored, male, 79; colored, female, 74. On January 1, 1906, there remained in the Hospital 661 patients. Adding to this the number admitted during the year there were 9,113 treated in the wards. The daily average of inmates was 661. There were 1,295 deaths; 7,169 patients were discharged and 665 remained on January 1. There were 762 deaths from incurable causes, of which 229 were from tuberculosis. The gross mortality was 14 per cent, and the actual mortality 9 per cent. The Coroner viewed 246 bodies; 451 patients died within thirty-six hours after admission. There was a slight increase in the number of patients to receive the benefits of treatment in the various services of the Outdoor Clinics: 19,559 received medical and surgical advice, necessitating 70,916 consultations.

The work of the Ambulance Department has been increased in direct ratio with the growth in population and industrial enterprises of the city. It has been found necessary to make use of a third ambulance to meet the increased demands made upon it. All calls have been answered with dispatch, and prompt succor has been furnished to all victims to accidents of violence, poisons or acute illnesses. This Department responded to 1,894 calls, made in an average time of thirty minutes each. This represents the greatest number of calls ever made in a single year. All years have been surpassed also in the number of accident and emergency cases treated in the Surgical Amphitheatre. There were 6,104 cases of this description treated, in 1,507 patients general anaesthesia was induced; in 386 spinal analgesia, in 265 local analgesia and 2,280 surgical operations were performed.

In the Obstetrical Wards there were 295 parturient women delivered. There were two deaths in this service from puerperal septicæmia, both of which occurred in women brought to

the Hospital in labor, in whom forceps had previously been unsuccessfully applied.

The Department of Pathology and Bacteriology, under the able direction of Dr. O. L. Pothier and his assistant, Dr. M. Couret, has rendered indispensable service to the Hospital Staff in the differentiation of diseases and pathogenic processes. In this Department 11,600 specimens of various pathological products were examined. At the Pasteur Clinic 324 patients bitten by animals supposedly or actually rabid, applied for treatment; 210 were given the preventive inoculations and 114 were rejected with the comforting assurance that no necessity for treatment existed. The benefits of this Clinic were extended gratuitously to 67 patients coming from seven other States.

The Hospital Dispensary has been managed with economy, and all prescriptions compounded of the purest drugs. Mr. Jos. Walker, Pharmacist in charge, has given eminent satisfaction.

For the first time in the history of this Hospital, during the past year, a complete medical history of every patient entering the Institution has been written and placed on file in the Registration Bureau. There can be found those valuable medical statistics necessary to writers of medical literature, a literature built-up of facts demonstrated and recorded at the bed-side of the sick. There were 7,543 clinical histories recorded for the year, classified as follows: Medical, 3,005; Surgical, 3,453; Gynaecological and Obstetrical, 1,085. Much of the efficiency of this Bureau is due to the enthusiasm and splendid work of the Registrar, Dr. G. Farrar Patton.

Special reports concerning the Training School for Female Nurses have been addressed the Medical Committee. I have but to add that it is necessary to increase the number of Nurses to meet the needs of a constantly increasing number of patients.

The Department of Electro-Therapeutics and Radiography has at last been fully developed and equipped with costly paraphernalia. This Department is a most valuable adjunct, it

being possible now to treat many diseases and conditions that formerly received no attention. Six hundred and thirty-six radiographs, for diagnostic purposes, were made by the Physician in charge.

I have few recommendations to offer; in fact, but three. These, however, are of paramount importance, and I earnestly solicit your approval and active support to the end that they may become realities. I would first recommend that all patients ill of pulmonary tuberculosis be segregated and placed in wards specially altered to suit the therapeutic and hygienic requirements necessary in the management of this disease.

I would remind you of the dangers of infection to which other patients, already weakened by other diseases, are exposed when brought in hourly contact with tuberculous subjects. Sleeping in and breathing the air of the same wards occupied by tuberculous patients is a grave and unnecessary risk for non-tuberculous, but weak and devitalized patients to be exposed to. Better hygienic conditions and infinitely better treatment for tuberculous patients could be maintained and practiced were all such cases assigned wards specially set aside for them. I ask to be relieved of the grave responsibility of mixing tuberculous with non-tuberculous subjects with the inevitable danger imposed upon the latter.

I desire to again urge the necessity for providing a separate building for the isolation of contagious and infectious diseases. It has been a matter of the greatest difficulty to isolate these infections, and then only by placing patients sick of various infectious diseases in the same wards. This constitutes nothing less than a sanitary crime.

I specially recommend and request that the Surgical Amphitheatre, at present totally inadequate to the surgical necessities of the Institution, be remodeled and enlarged. During the past year 6,104 accident and emergency cases alone were given surgical treatment in the small building now used for that purpose.

X RAY ROOM.

In addition, all the surgical work of the Institution was done there, which resulted frequently in delays and postponement of operations that should have been done. When you reflect that 2,280 surgical operations were performed in the past year in four operating-rooms the necessity for a larger Amphitheatre is perfectly apparent.

I trust these recommendations may meet with your approval and elicit favorable action.

The domestic affairs of the Institution, under the supervision of Sister Agnes, have been managed with economy and a due regard to the necessities and comfort of the sick.

I desire to express my full appreciation of the noble, unselfish and charitable work done by her and the Sisters under her direction.

In all that has been done my two assistants, Drs. J. A. Danna and S. W. Stafford, have borne their part and merit appreciation and thanks, which I cheerfully acknowledge.

Mr. James R. Leake, Clerk, and Mr. John Ponder, Engineer, have done this year, as in the past, all that could be asked or expected of them in the important positions they occupy.

In conclusion, I beg to thank the Board as a whole, and the House and Medical Committees for the courtsey and unfailing support they have accorded me in the discharge of the numerous duties of the Executive Office.

Respectfully submitted,

J. M. BATCHELOR,

HOUSE SURGEON.

## Pathological Department.

CHARITY HOSPITAL,  
STATE OF LOUISIANA,  
NEW ORLEANS, February 4, 1907.

To the Board of Administrators of the Charity Hospital:

*Gentlemen*—I have the honor to submit the following annual report of work done in the Pathological Department and also the report of the Pasteur Institute for the year 1906:

Specimens of urine examined.....	6,720
Specimens of blood examined.....	3,203
Specimens of sputum examined.....	900
Specimens of faeces examined.....	415
Specimens of tissues examined.....	156
Specimens of cultures examined.....	77
Specimens of pus examined.....	87
Specimens of stomach contents examined.....	14
Specimens of fluids examined.....	27
Specimens of milk examined.....	1
Autopsies held.....	166
Photographs.....	58
Total.....	11,824

In the Pasteur Institute we had 324 patients, of which 114 were dismissed without treatment, 210 were treated, 173 discharged, 1 died and 23 deserted. Thirteen were left over to this year for completion of treatment. Of these cases, 255 were from Louisiana, 42 from Mississippi, 13 from Tennessee, 5 from Texas, 4 from Alabama, 2 from Arkansas, 2 from Oklahoma and 1 from Florida.

During the year the milk supply of the Charity Hospital was examined about every three months, and found to be free from any pathological bacteria.

Provision has been made to keep animals under observation during the period of incubation of rabies, in cases bitten by suspicious animals. It is unfortunate, however, that we have no suitable place to have these cages. These cages are now in the driveway of the deadhouse, and are in the way of vehicles.

During the year we have purchased ten new microscopes and have had ten of our old microscopes repaired, so that we have now six microscopes in good condition.

In closing, I wish to commend the efficiency of Dr. M. Conret, in his work in the Department, also the different Students detailed to the Department. I wish, also, to thank the House Surgeon for the assistance in carrying out the different changes and needs of the Department.

Respectfully submitted,

O. L. POTIER, M. D.,

PATHOLOGIST.

## Report of Directress.

---

CHARITY HOSPITAL,  
STATE OF LOUISIANA, }  
NEW ORLEANS, December 12, 1906.

To the Members of the Medical Committee, Charity Hospital, Board of Administrators:

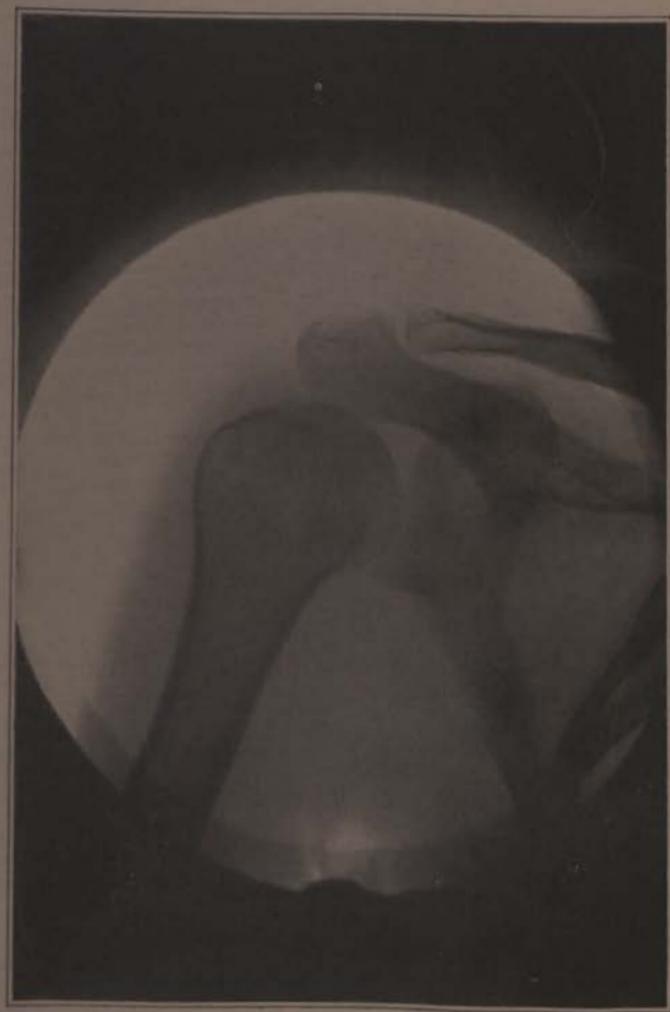

*Gentlemen*—The confidence reposed in this office has my efforts ever alive to the well being of this very helpful aid to our work and charity. Indeed, no more fitting ground-work to its everlasting good could be better purposed than by individualizing the essential official offices, that to attain success must govern, in the immediate, all things essential to a proper discipline.

I confess my indebtedness to your Honorable Board for the wisdom of this discretion that will privilege the intelligence and safely guided efforts of our graduates to a security and good service among our people.

The applications that we have been addressed since our last annual report, number ninety-two, of which forty-five were received. The request for application forms greatly exceed the applications, and the mere mention of this, I trust, will explain the contrast that is shown with previous reports, in which all applications were recounted.

In the sessions course seven pupils were released, and to the purpose of good discipline, I regret to say, it became needful to dismiss one.

By qualification and the examination merit to the approval of our Faculty of Lecturers, there is submitted to you to-day as deserving the Hospital diploma and medal, twenty-one, comprising our Senior Class. This will permit of the advance of

X RAY. SHOWING NORMAL SHOULDER JOINT.

twenty-eight pupils to the Senior Class for the coming session and at this time begin a Junior Class of twenty-four.

The Massage and Invalid Cooking Classes have been fostered and encouraged to better qualify the individual capability of our graduates. The guidance of our pupils by systematic teaching is creditable to our excellent Faculty of Lecturers, whose earnest efforts it is my pleasure to give just mention and my thanks.

The Hospital Staff have, by word and act, encouraged our efforts, and our House Surgeon, Dr. J. M. Batchelor, and his able assistants, Drs. J. A. Danna and S. W. Stafford, have ever shown a kind and willing counsel and generous assistance. The timely and judicious supervision by your Honorable Board of the School's requirements, make appropriate the good of its service and your administration.

Respectfully submitted,

SISTER AGNES,

DIRECTRESS.

---

## Report of the Chairman of the Faculty.

---

CHARITY HOSPITAL,  
STATE OF LOUISIANA,  
NEW ORLEANS, December 12, 1906.

To the Members of the Board of Administrators:

Gentlemen—To-day marks the completion of the thirteenth session of the Hospital Training School for Female Nurses. From year to year the importance of this adjunct to the Hospital has become more fully recognized, and we are assembled to-day to celebrate the completion of another successful year and to send out into the world, with our approval and diploma, the twenty-one graduates of this session. It is a matter of regret that the number of pupils in the School is not larger, for with the constant growth of the Hospital and the contemplated improvements in the way of additional buildings for patients in the near future, the need for a much larger corp of Nurses will be urgent. In the past year all things conducive to a healthy growth and stable government of the School have been put in operation by your Honorable Body. The active and earnest interest evidenced by the Faculty of Lecturers has been a matter of much satisfaction to us, and we feel it our duty, as well as our pleasure, to publicly express our thanks and appreciation to these gentlemen for their exertions in behalf of the School. The administration of the School by our benevolent Directress, Sister Agnes, and the Superintendent of Nurses, Sister Dolores, has been such as to best promote its interests and protect its pupils.

I now take pleasure in presenting to you for graduation and in recommending as worthy of diplomas at your hands, twenty-one Nurses. These young ladies have served the required two years in the wards of this Institution and have successfully passed all examinations required.

Respectfully submitted,

J. M. BACHELOR,

CHAIRMAN.

			296

## MANNER OF DELIVERY.

Naturally.....	275
By Forceps.....	14
By Podalic Version.....	6
By Cæsarian Section.....	1
	296

There were 5 cases of Twin Pregnancy.

There was 1 case of Triplets.

## MORTALITY OF MOTHERS.

Of the 296 maternity cases, 9 died, making a mortality of 3. + per cent.

## CAUSES OF DEATH.

Eclampsia.....	8
Pneumonia.....	1
Placenta Previa.....	2
Shock (Cæsarian Section).....	1
Septicemia (cases admitted in labor after ineffectual use of forceps).....	2
	9

The number of children born were 303.

Male.....	163	Living.....	268
Female .....	140	Still-born.....	35—303

A BRIEF DESCRIPTION  
OF THE  
Bellevue System of Recording and Filing  
Histories of Hospital Cases.

NOMENCLATURE.

This improved system, adopted by the Board of Administrators of the Charity Hospital on the recommendation of the House Surgeon, and put into operation in February, 1906, is based upon a rigid but logical nomenclature of diseases, conditions and injuries.

Quoting from the official pamphlet published by the Trustees of Bellevue Hospital, New York, in connection with the adoption of this system:

“Any system of filing histories of cases in a large hospital is of value to the extent to which it permits easy access to the files and economizes space. \* \* \*

“A prerequisite to filing histories under the names of diseases, which is the basis of this system, instead of under the names of patients, or by serial numbers, is absolute uniformity in the terms employed in diagnosis.”

Upon the adoption of the Bellevue system the nomenclature of same, printed in a small pocket manual, became the official nomenclature of the Charity Hospital and its use is made obligatory in all departments, being broadly divided into four principal parts, viz.: Medical, Surgical, Gynecological and Obstetrical. Under each of these principal headings the following sub-divisions occur:

## MEDICAL.

Diseases of the Blood.  
 Diseases of the Circulatory System.  
 Diseases of the Digestive System.  
 Diseases of the Ductless Glands.  
 Infective Diseases.  
 Diseases of the Kidneys.  
 Diseases of the Lymphatic System.  
 Miscellaneous Diseases and Conditions.  
 Diseases of the Nervous System.  
 Parasitic Diseases and Parasites.  
 Poisons and Intoxications.  
 Diseases of the Respiratory System.  
 Diseases of the Spleen.  
 Diseases of the Mind.

## GYNECOLOGICAL.

Diseases of the Female Bladder.  
 Diseases of the Ligaments, Tubes and Ovaries.  
 Injuries of the Pelvic Floor.  
 Disorders of Menstruation.  
 Diseases of the Female Urethra.  
 Diseases of the Uterus.  
 Diseases of the Vagina.  
 Diseases of the Vulva.  
 Gynecological Tumors.

## OBSTETRICAL.

Abortion.  
 Miscarriage.  
 Premature Birth.  
 Pregnancy.  
 Parturition.  
 Puerperium.

## NEW BORN CHILD.

New Born Child.  
 Prematurity. Still-born Child.

## SURGICAL.

Diseases of Bone.  
 Injuries of Bone.  
 Diseases of Bursæ.  
 Injuries of Bursæ.  
 Diseases of the Circulatory System.  
 Injuries of the Circulatory System.  
 Congenital Malformations.  
 Diseases of the Digestive System.  
 Injuries of the Digestive System.  
 Diseases of the Ear.  
 Injuries of the Ear.  
 Diseases of the Eye.  
 Injuries of the Eye.  
 Gangrene.  
 Diseases of the Genito-Urinary System.  
 Injuries of the Genito-Urinary System.  
 Herniæ.  
 Infective Diseases.  
 Injuries.  
 Diseases of Isolated Glands.  
 Injuries of Isolated Glands.  
 Diseases of Joints.  
 Injuries of Joints.  
 Diseases of the Lymphatics.  
 Injuries of the Lymphatics.  
 Miscellaneous Diseases and Conditions.  
 Diseases of the Muscular System.  
 Injuries of the Muscular System.  
 Diseases of the Nervous System.  
 Injuries of the Nervous System.  
 Diseases of the Respiratory System.  
 Injuries of the Respiratory System.  
 Diseases of the Skin, Hair and Nails.  
 Tumors.

(By agreement all forms of "Syphilis Acquired" are classed as Surgical at the Charity Hospital.)

Throughout the entire system alphabetical order is the rule. It will be observed that the foregoing sub-divisions follow in that order and the same plan prevails in the arrangement of separate diseases under each heading. Thus, in the Medical Division, in the large drawer of the filing cabinet devoted to Diseases of the Circulatory System, the main "Guide Cards" (lettered in black ink) follow each other alphabetically: "Arteries," "Heart," "Pericardium," "Veins," while the intervening minor "Guide Cards" (lettered in red ink) are arranged alphabetically in each main division, those for the Arteries reading *Aneurism, Aortitis Arterial Sclerosis General, Embolism, Thrombosis*, and so on to the end of the list.

This scheme is so natural and simple as to greatly facilitate the filing of histories and subsequent reference to any particular one by its serial number, the manner of giving which will be presently described.

#### MECHANISM OF THE SYSTEM.

In the Record Room the following mechanical accessories are in use:

1. Two small, *i. e.*, long and narrow, boxes containing the Index Cards of the separate diseases, conditions, injuries, etc. These are arranged alphabetically from front to rear, one box holding the cards devoted to Surgical diagnoses and the other Medical. For the sake of compactness the Gynecological and Obstetrical diagnoses occupy the rear of the Surgical box, while the cards for diseases and surgical conditions of children, duplicating those of adults, are kept separately in the rear of the Medical box. Each history received in the Record Room is given a serial number next in order after the last case of the same disease, as shown by the proper Index Card. This number is written in a vertical column on the Index Card and then written on the first sheet of the history, as well as on the "Ticket" accompanying same, and thus becomes the mark of

identification for that history for all future time. The serial numbers on the Index Cards also show at a glance how many cases of any given disease have been filed since the system was instituted.

2. The Filing Cabinets, consisting of deep, square drawers superimposed upon each other like sectional book cases four tiers high, and occupying one entire side of the room. Each drawer is a unit provided with guide cards between which the completed histories are inserted vertically in numerical order. Every history is enclosed in a strong manila cover on the upper margin of which is written the diagnosis, serial number, name of patient and number of ward. This inscription is turned toward the front and permits of a rapid inspection of histories previously filed without taking any out.

Each drawer bears a label showing the kind of histories it contains, the first three vertical tiers holding medical histories, the next four surgical, and so on through the entire system. Diseases and surgical conditions of children are filed separately from those of adults. When any compartment of a drawer is full the histories are removed, indexed and permanently bound in a book, which is suitably inscribed and given its proper place in the library of the Record Room.

3. The Cabinet Index of patients by name, in which the "Tickets" belonging to the separate histories of each year are filed in alphabetical order between guide cards, according to familiar card index system in general use. This makes it easy to find any history when the name of the patient is known, by reference to the serial number of the disease in the proper drawer of the Filing Cabinet.

4. The Rotary Copying Press, for making copies of any written history on file.

## HISTORY BLANKS.

The component parts of the completed history as received in the Record Room for filing are:

1. The Bedside Card, or "Ticket" (4x6 inches in size,) which is issued at the gate when patient is admitted and is kept on a clip at the foot of the bed. On the termination of the case it is filled out (on both sides) so as to give a synopsis of the main facts and accompanies the history to the Record Room. When filed in its special cabinet it becomes the index of the history.
2. The Medical (or surgical) History Sheet with headings as follows: Name.....Nativity.....Division (Med. Surg. Gyn. Obst.) Serial No.....Ward.....Occupation.....Age.....Admitted.....(date), Discharged or Died.....(date), Diagnosis.....Complications.....Visiting Physician (or Surgeon).....House Surgeon (or Interne).....

## FAMILY HISTORY. PREVIOUS HISTORY. PRESENT ILLNESS.

(Under each of these headings are notes as to questions to be asked.)

3. Continuation Sheet, for use in extending history as treatment progresses.
4. Physical Examination Sheet, giving notes as to various details.
5. Clinical Pathology Sheet, divided horizontally into following sub-headings: Urine, Blood, Sputm, Gastric Contents, Feces, Discharges and Exudates, with notes under each division as to points to be covered.
6. Temperature Charts, (separate for medical and surgical) with directions that black ink be used in day time and red ink at night.
7. Medication Charts (printed on pale blue paper) with vertical ruling as follows: Date, Oz. of Urine, Diet, Medication, Nurses' Notes.
8. Ante-Partum Chart, with headings in minute detail for parturition cases.
9. New Born Child Chart, showing particulars as to infants born.
10. Post Mortem Record Sheet (printed on yellow paper).

The History Blanks (8½x11 inches in size) are all printed in copying ink, and for writing histories and otherwise filling in the forms only copying ink, black or red, is allowed to be used, as the system contemplates making copies in a modern machine, or by the old fashioned letter press, when it may be desired to carry away a copy of any history, the originals never being allowed to leave the Record Room.

## COMPLICATIONS AND CROSS-REFERENCES.

That which may be regarded as the "show feature" of the Bellevue system is its scheme for recording complications of diseases in a manner so simple and direct as to enable any one compiling notes to ascertain instantly not only what complications have been observed in any given disease, but to locate each history by its serial number with reference to any special complication if it be desired to ascertain any details about the effects of such complication.

Also to ascertain by "Cross-Reference" to any particular disease or condition just how often it has appeared as a complication and with what cases (by serial numbers) of the diseases with which it has been associated.

This is accomplished by providing in every drawer of the filing cabinet, immediately following the Guide Card of each disease, two manila covers, one inscribed (in red ink) "*Complications of (name of disease)*" and the other "*Cross-Reference (name of disease)*." These covers contain a suitable number of sheets for making the necessary entries, as shown in the following examples (A), being the one for Complications and (B) for Cross-References:

(A)

Division (Medical or Surgical) Dates, from.....

To.....

## COMPLICATIONS OF (NAME OF DISEASE)

(For example, Bronchitis, Chronic).

NAMES OF COMPLICATIONS	HISTORY NUMBERS OF THE DISEASE NAMED ABOVE
(Example) Valvular Disease, Chronic Cardiac.....	25, 36, 42, 45, 56, 61, 74.
(Example) Nephritis, Chronic, Interstitial.....	28, 33, 48, 62.
(Example) Malarial Fever.....	18, 24, 125, 182.

(And so on for as many lines of the page as required to note all the complications.)

(B).

Division (Medical).

Dates, from.....

To.....

## CROSS-REFERENCE SHEET.

Name of Complicating Disease (for example, Malarial Fever).

NAME OF DISEASES COMPLICATED	HISTORY NUMBERS OF THE DISEASES NAMED BELOW
(Example) Bronchitis, Chronic .....	18, 24, 125, 132.
(Example) Tuberculosis Chronic, Pulmonary.....	85, 97, 108, 156.
(Example) Uncinariasis .....	15, 31, 40, 66.

(And so on for as many lines of the page as required to note diseases with which Malarial fever has appeared as a complication.)

Before any history is filed its complications are duly noted on the "Complication Sheet" of the "Principal Disease" named on its Ticket, while each separate complication is noted on the Cross-Reference Sheet of the disease, injury or condition named as a complication. In a case presenting four complications this would necessitate four separate entries on the Complication Sheet of the Principal Diseases and one entry on each of the four Cross-Reference Sheets devoted to the associated conditions or diseases. When any given number of histories are bound in a book the complications and Cross-References of those histories are copied and placed in the front of the book just after the index.

## COMPREHENSIVENESS AND PRECISION OF THE SYSTEM.

The Bellevue system aims at being comprehensive, concise and logical. It is also technically precise. In dealing with certain conditions permitting such diversity of diagnosis as to unduly extend the nomenclature, as for instance with valvular lesions of the heart, the official diagnosis covering the entire range of conditions belonging to ordinary Chronic Endocarditis is simply "Valvular Disease, Chronic Cardiac," while the par-

ticular lesion present in any case is to be stated on the history, but not on the Ticket which serves as the index of the case.

In the same way there is but one official diagnosis for Acute Nephritis, the writer of the history being at liberty to describe it by any suitable adjective in his account of the case. Chronic Nephritis is duly classed as either Parenchymatous or Interstitial.

Such inexact diagnoses as "Acute Diarrhoea" "Ascites," and other terms relating merely to the clinical phenomena of pathological conditions for which the official nomenclature offers precise names, are not accepted. Edema of the Lungs, Uræmia and Pelvic Abscess, not being properly diseases, but resulting conditions, are accepted only as complications.

As illustrating the conciseness of the system it may be mentioned, for one example, that the multitudinous Confusional Psychoses are all given that one diagnosis, with amplification in parenthesis on the history. The nomenclature of diseases of the eye and of the skin is judiciously abridged with the understanding that comparatively rare diseases may be given their proper alphabetical position as they occur. This general principle pervades the entire system with the object of maintaining a maximum of efficiency within a minimum of space.

#### UTILITY OF THE SYSTEM.

In the relatively short time since its inauguration at the Charity Hospital the new system has amply demonstrated its great practical utility. The House Surgeons, Visiting Staff and Internes who have occasion to look up any special case or series of cases can now find what is sought immediately, while the Record Room, spacious, quiet and well lighted, with its ever increasing store of valuable records, is a welcome haven for physicians gathering data for scientific papers and students preparing their graduation theses. It also offers advantages never before available to court officers and lawyers, who, upon

receiving permission from the House Surgeon, are now able to secure evidence bearing upon legal issues of vital importance with practically no trouble or loss of time, either to themselves or the Staff of the Hospital.

Finally, in the long course of years, the bound and indexed volumes that shall have taken their places on the shelves of the Record Room will form a medical library of priceless knowledge, based as it is, not on theory, but on practical experience extending over thousands of cases.

## REPORT OF RECORD ROOM FOR THE YEAR 1906.

N. B.—The Record Room was established during February 1906, figures for January and the first half of February, as given in the following tables, being taken from the tickets previously in use, thereby causing some slight deviations from the technical precision of the new system.
